Weekday - Weekend Differential	1.01	-17.2%	1.01	-17.8%	1.01	-20.4%	1.04	-19.2%

Note: Movement represents difference from last week.

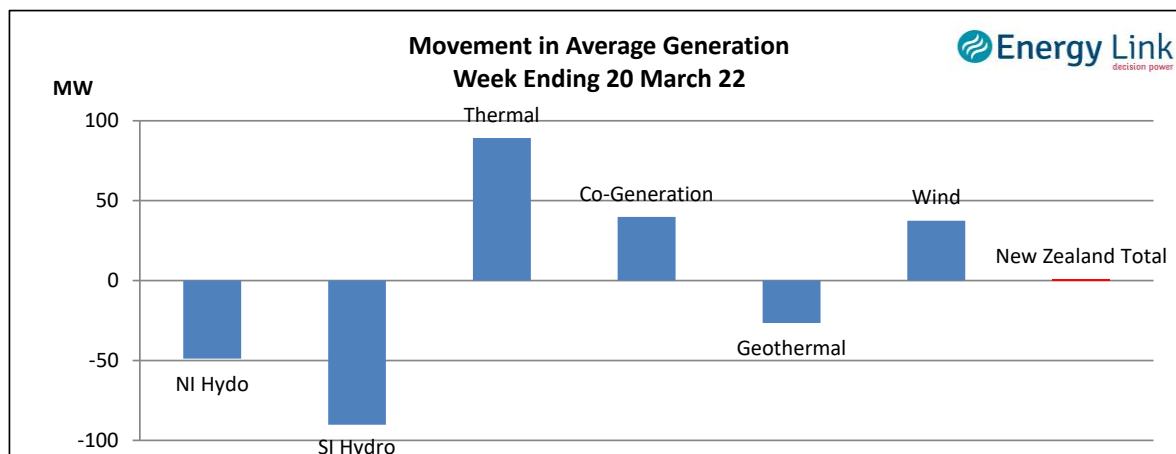

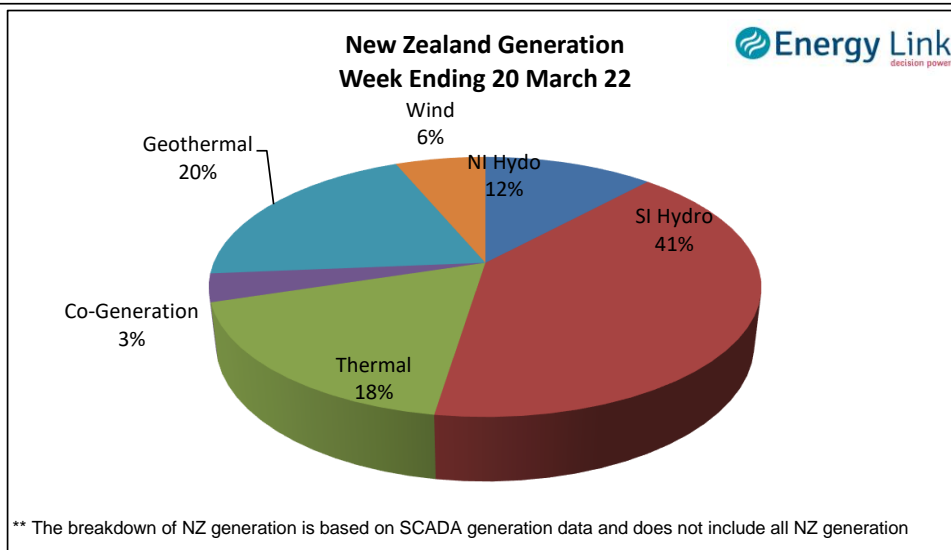

Storage: (as at last Thursday)

Total Storage decreased to 2999 GWh.

NI storage decreased by 10 % to 343 GWh while SI storage decreased by 5% to 2655 GWh.

Generation:

Average Generation Market Share ¹

Contact	Mercury	Genesis	Meridian	Trustpower	Other
20% (21%)	22% (21%)	17% (17%)	33% (33%)	2% (2%)	6% (5%)

¹ Generation market share figures are based on SCADA data. The number in brackets represents the generation market share % from the previous week.

Demand data based on un-reconciled SCADA data.

ASX Electricity Futures

The **Australian Securities Exchange (ASX)** listed Base Load Electricity Futures, Strip Futures and Calendar year Strip Options for two grid reference points (Otauhu and Benmore) in the New Zealand electricity market in July 2009. The ASX New Zealand Electricity Futures contracts are cash settled using the arithmetic average of half-hourly prices at the designated node over the period of a calendar quarter.

The two charts below display the price movements of the front quarter futures contract during the current quarter and for the four quarters prior to the current quarter. Also shown is the volume of contracts traded, the relevant spot price and the spot average price over the quarter during the time when each contract was the front quarter contract.

The chart to the right shows the most recent transactions for all currently traded futures contracts at both the BEN & OTA nodes. For comparison these prices are mapped against the prices for the same contracts four weeks prior to the current Market Review.

Carbon Dioxide Emissions

The chart below shows the estimated Carbon Dioxide (CO₂) emissions for New Zealand's major thermal power stations. The estimates are based on weekly generation output and assumptions on each plant's thermal efficiency.

Note: Since 22 Feb 2016, Geothermal plant is now also included in the total carbon emissions.
